Abbreviations, Organizations, and Associations in Weathering Standardization

Atlas is represented in many standards developing and industry organizations. Our experts contribute through committee membership, leading projects, holding chairs and secretaries, speaking at symposia and conferences, and supporting associations and events. Atlas partners with various organizations worldwide holding joint workshops, symposia, and conferences.

Standards Developing Organizations (SDO's) use numerous abbreviations for committees, projects, processes, and documents. This publication is intended to support those who are active in standardization to identify and understand acronyms and abbreviations used.

Part 1 is a list of frequently used abbreviations in standards work. Part 2 lists SDO's and committees. Parts 3 and 4 are selected industry and governmental organizations and international agreements, all being related to standardization in the field of environmental ageing, weathering, and lightfastness testing.

Given the sheer number of SDO's, this list cannot be complete. In addition, some organizations change their names to keep up with globalization or update of scope. Those name changes - if known at the publication date - are included in notes.
